

MASTERSOLUTION
PROTECT

Entire system protection

Computer protection and data recovery at the click of a mouse

MASTERSOLUTION PROTECT combines a variety of functions related to the selective restriction of desktop configurations with effective hard drive protection and roll-back technology. This solution provides optimum all-round protection for all computers and networks in training environments. MASTERSOLUTION PROTECT effectively prevents unwanted or malicious changes that may damage the operating system. The deletion of important files and applications and the installation of unwanted software can be prevented with one click, tailored to the needs of your company. MASTERSOLUTION PROTECT permanently monitors all system files and folders. Thus, if required, a previous system state selected by the user can easily be recovered. This powerful software also enables the definition of files or folders to be excluded from roll-back monitoring.

Merkmale:

Access management

MASTERSOLUTION PROTECT can prevent the copying, moving, deleting and renaming of files and folders. Predefined folders can be hidden from participants. The user start menu can be customised, and the favourites menu can be removed. Display of the taskbar context menu can be disabled with one click. The ability to log off, shut down, lock or change passwords can be blocked depending on the user.

Network and Internet resources

- Restrict network environments regardless of the user
- Block selected network drives with one click
- Prevent the installation of unwanted software

Highlights

- Optimum system protection
- User-specific management of rights
- System restoration through simple reboot
- System protection and data recovery at the lick of a mouse
- Security configurations transferred to selected computers on the network
- Combine with MASTERSOLUTION SUITE XL:

As of version 10.5 of MASTERSOLUTION SUITE XL, all restrictions established by MASTERSOLUTION PROTECT can be optionally disabled when connected to the classroom. Thus all participants can access all necessary applications and resources during training. When the trainer ends the connection, protection is immediately reactivated.
