

MASTERSOLUTION REFLECT

IT asset management

Control all IT resources & monitor all network activity

MASTERSOLUTION REFLECT enables the complete, centralised control of all networks and PC activity within the company/institution (even across various locations). The integrated alerting module informs you immediately about any changes being made to an individual PC. Detailed inventory & reporting functions (Crystal Reports), rapid software distribution and efficient licence management complete this solution. MASTERSOLUTION REFLECT provides support with the optimisation of IT processes and contributes significantly to cost reductions.

With MASTERSOLUTION REFLECT, all computers on the network can be located quickly and easily, allowing all important information to be stored and managed centrally. User groups can be freely defined. Applications packages consisting of applications, files, folders and installation parameters can be created and then either executed automatically in the background or executed on demand. For multi-site installation, it is possible to set up a PC as a warehouse for the distribution of user packages.

Features:

Reports and analysis

Detailed reports can be prepared. With one click, all information is available at a glance. A new "welcome" dashboard is integrated in the MASTERSOLUTION REFLECT Console that gives you a quick summary of all daily PC activities, printing costs, number of alerts, etc. The integrated "Crystal Report Engine" provides a range of pre-prepared management reports for printing, export and archiving. Customised queries can also be set up.

Monitoring of all network and PC activities

- List of all applications used on any PC
