Simulation and Authoring System [SAS] – creation of learning modules,
flexible capture of learning content, sustainable knowledge management

MASTERSOLUTION SAS is a simulation and authoring system which enables the simple creation of, for example, learning modules, software simulations, documents, online help functions, as well as the rapid worldwide localisation of content in several languages. With the help of this solution, complex software functions or business processes can be uniquely mapped (logged by the system operation) and made available to business partners, employees or other users at any time.

Areas of application:

Creation of learning modules, flexible capture of learning content, sustainable knowledge management, software presentations, interactive training and tutorials, interactive tests and self-tests, online help functions, quality documentation (HTML, Word and PDF)

Examples of use:

Banco Santander:

“Credit management system” interactive online training

DAT:

“Interactive tutorial on vehicle insurance claims”

EON AG:

SAP Training

Highlights

- Universal recorder for a variety of simulations and learning modules
- Re-recording to enable simple updating of existing learning content
- Create all learning materials from one source
- Create learning content easily and intuitively
- Present complex processes in a simple and understandable manner
- and make this information available at all times
- Preserve knowledge resources sustainably
- Synchronise the work of several authors in one system
- Reduce time and costs
