## MASTERSOLUTION VMS

Video portal  
Media distribution  
Video editing

Video Management System [VMS] – manage and distribute secure media content,  
videos and recordings easily  
Product image as on website

With the MASTERSOLUTION Video Management System [VMS] media content, videos, recordings and live broadcasts can be centrally managed with ease, distributed or made available to selected users. Users benefit from video portals, media distribution and video editing. Decide with one click if content is available for free download or is copy-protected. Content can be integrated into any number of platforms, websites and portals through the use of a permalink. Unique video compression and transmission technology guarantees buffer-free playback with no delays and there is no need for an external video player. Design your own video portal. We offer the MASTERSOLUTION VMS software solution, and we guarantee the highest quality at low bandwidth for your video portal, media distribution and video editing.

## Areas of application:

Secure management and provision of media content, videos and recordings

## Examples of use:

### **Volkswagen**

#### **Vertriebsbetreuungsgesellschaft mbH:**

Partner information, internal project communication, video learning platform within LMS

### **Fachhochschule für öffentliche Verwaltung NRW (FHöV NRW):**

Video archive on memory research, expanded teaching with modern, interactive teaching methods, and integration into existing institutional learning platforms

## Highlights

### **Video portal, media distribution and video editing for end users:**

- Individual channels connected to profiles
- Device-independent output and control (mobile devices, tablets, PCs, laptops, TVs)
- Select and edit your own content without previous knowledge
- Highest quality transmitted videos Individual jump markers with thumbnails specified by the client lead users to the desired results in a targeted manner

### **Technical details:**

- Unique streaming for highest video quality (even on narrow bandwidths)
- Optimisation for mobile networks e.g. UMTS and LTE
- Jump markers
- Secure, encrypted permalinks for the distribution of video content
